Onshore Oil and Gas Supplementary Planning Document Consultation

Barrowford Parish Council having discussed this consultation and feel that the only weakness is that whilst there is reference to sustainability in the introduction, there is no reference to Climate Change leading to Global Warming and the consequential effect on the earth's natural environment.

Encouraging and increasing the use of fossil fuels such as shale gas and also methane released during fracking has been widely predicted by climate change scientists to add to Global Warming.

If fracking goes ahead on any large scale we will not meet our internationally agreed targets of reducing carbon emissions by 2020.

Yours sincerely

Iain Lord

Clerk to Barrowford Parish Council
